#### **ACCURACY OF CATALOGUE**

While every care and attention to details in catalogue has been made we cannot guarantee that some mistakes have occurred during printing or construction of catalogue.

#### **POLL TESTING**

Ascot Charolais heifers have been tested by the Animal Genetics laboratory at the University of Qld with the SEQ\_POLL Prediction test to identify their poll status. While this is the most accurate poll test available to determine if an animal is PP (homozygous polled) there is no guarantee by Ascot that this is 100% correct. We rely on the university to determine an animals status. Therefore Ascot cannot bear direct liability or any consequential losses incurred by the purchaser should this test deemed to be incorrect.

### WHO'S YOUR DADDY?

#### WHY SIRE VERIFY?

At Ascot we Sire Verify all our sale bulls & heifers to ensure that the animal you are investing in is as portrayed in the catalogue. Why is this important?

You are making an investment in genetics. These genetics, or pedigree of the animal you are buying, need to be independently verified as correct, not what we think it is.

#### FIT FOR PURPOSE:

An example - You are looking for a bull with certain EBV's for calving ease and low birthweight - if the bull you purchase was by a different sire to what was thought, then these values would be incorrect. He may have poor calving ease & high birthweight – not desirable if you were needing a bull to join with heifers for instance.

Another scenario – You have chosen to invest in a bull or heifer with particular traits - fat, muscle or marbling for example to influence your herd. If the animal you have selected is not sire verified, then there may be a possibility of it having different carcase trait values altogether.

Ebv's are influenced by historical data from the animal's pedigree, so an incorrect pedigree means incorrect EBV's. This then is an issue as the bull you have purchased is not fit for the purpose you intended.

At Ascot we strive to give as much accurate information as we can. As well as all measurements collected and submitted to the breed society, we submit DNA to identify pedigree, and also the homozygous polled gene in our Charolais herd, to give you as much information as we can to help you in making your purchase.

## **HOMOZYGOUS POLLED**

All animals stated as Homozygous polled in this catalogue have been tested with the SEQ\_POLL Prediction test at AGL, University of QLD prior to sale, and are PcPc or PcPf Homozygous.

#### **HOMOZYGOUS POLLED EXPLAINED**

Recently, candidate mutations associated with polled phenotype in European breeds of cattle were found. There are two independent origins of polled, one found in Holstein-Friesian and Jersey breeds (Pf), the other in many European breeds of Celtic origin (Pc) such as Angus, Blonde d'Aquitaine, Dexter, Limousin. Charolais and Hereford, among others. Polledness is dominant; a polled animal can have one or two copies of the gene. All offspring of a bull with two copies of polled (homozygous) will be polled. Genetic testing is a cost effective means to determine if a polled animal has 1 or 2 copies of the gene.

**Pc/Pc Polled.** Two copies of the Polled-Celtic molecular marker are present. All offspring will be polled.

**Pc/Pf Polled.** One copy of the Polled-Celtic and one copy of the Polled-Friesian molecular markers are present. All offspring will be polled.

Poll testing: Ascot Charolais bulls have been tested by the Animal Genetics laboratory at the University of Qld with the SEQ\_POLL Prediction test to identify their poll status. While this is the most accurate poll test available to determine if an animal is PP (homozygous polled) there is no guarantee by Ascot that this is 100 % accurate. Jim and Jackie asked me to assist them in ensuring that they do not sell a heifer Persistently Infected (PI) with BVD. In order to protect your profitability and their reputation, all heifers sold at Ascot Cattle Company have been screened to ensure that none of them are PI.

BVD is arguably the most significant pathogen impacting beef and dairy production systems in Australia. Animals exposed to the virus may suffer reproductive losses, secondary complications from immune suppression, or both. To protect your productions system's profitability, Jim and Jackie have ensured they won't pass a PI on to you by screening their herd, and further they have vaccinated their sale heifers to protect them should they meet a PI in the future.

Not only has your new heifer been vaccinated twice against exposure to BVD, but also twice against leptospirosis and 3-day sickness. Vaccinations are designed to limit the incidence and severity of infection should your heifer come in contact with any of these diseases. We encourage you to continue to provide annual boosters by administering booster vaccines as appropriate for your area to your heifers approximately a month prior to mating each year.

Good luck with your new heifer from all of the team at Ascot Cattle Company and from us at Swans

Veterinary Services! I work with veterinarians from all over Australia to structure herd level eradication programs to systematically manage BVD. If you would like help designing your own BVD management program feel free to ring me at 0427 716 907 or email me at enoch@swansvet. com
